Education

Bethune-Cookman University — Daytona Beach, FL
B.S. Computer Engineering, Summa Cum Laude (GPA 4.0) — *Aug. 2020 – May 2024*

Experience

Software Engineer, Core Engineering Team — July 2024 – Present
Apple — *Austin, TX*

- **Build large-scale backend services** by developing resilient Java / Spring Boot APIs, validation layers, and asynchronous workflows, resulting in improved reliability and reduced integration errors across advisor-facing platforms.
- **Develop reusable backend modules** by abstracting common CRM logic and implementing feature-flag-driven rollout patterns, which reduced duplicated code and increased development efficiency across multiple teams.
- **Enable AI-assisted workflows** by creating backend decision-support primitives, structured metadata pipelines, and real-time streaming interfaces, strengthening system readiness for ML-driven insights and automation.
- **Deliver cross-team integrations** through close collaboration with ML, platform, content, and quality engineering teams, aligning service contracts and preventing regressions during large-scale platform upgrades.
- **Support long-term architectural modernization** by researching orchestration patterns and scalable service abstractions that inform the evolution of Apple's AI-enabled enterprise systems.

Backend / Full-Stack Software Engineer Intern — Sept 2023 – Dec 2023
Splunk Inc. — *Daytona Beach, FL*

- Performed security analysis to identify and remediate admin-credential vulnerabilities across 40+ servers.
- Engineered "Custom Splunk Exec", a Ruby-based Puppet Type & Provider that prevents credential leakage during API execution, improving compliance posture by 30%.
- Enhanced system idempotency and manageability, leading to a 45% improvement in configuration-drift recovery time.

Student Researcher – EcoCar EV Challenge — Sept 2022 – Dec 2023
General Motors / Bethune-Cookman University — *Daytona Beach, FL*

- Integrated Advanced Driver-Assistance Systems (ADAS) into an electric-vehicle prototype using C++ and ROS 2.
- Developed a YOLO-based CNN for real-time pedestrian tracking (Python + TensorFlow), boosting detection accuracy by 35%.

Projects

Compliance Monitoring System *Python, Solidity, ML, Kafka* — Jun 2023 – Present

- Implemented Kelly Criterion, mean-reversion, and momentum strategies on Ready Trader Go market data, yielding a simulated 15% performance lift.
- Built an AdaBoost-based predictive model that improved trade decision accuracy by 20%.
- Automated regulatory scraping and generated immutable compliance reports via Ethereum smart contracts.

Competition

- Participant – Optiver Ready Trader Go (2023)
- Participant – IMC Trading Prosperity (2023 & 2025)

Technical Skills

Languages: Golang, C/C++, Java, Kotlin, JavaScript/TypeScript, Python, Rust, Ruby, Elixir, R
Frameworks: Spring Boot/WebFlux, React, Flask/FastAPI, Django, Ethereum, UVM, Kafka
Technologies: Kafka Streams, Redis, Docker, Kubernetes, Jenkins, AWS, Terraform, Ansible, Puppet, AWS EKS
Libraries: TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib
Databases: MongoDB, PostgreSQL, MySQL, DynamoDB, Redis
