Education

Bethune-Cookman University Daytona Beach, FL
B.S. Computer Engineering, Summa Cum Laude (GPA 4.0) *Aug. 2020 – May 2024*

Experience

Software Engineer, Core Engineering Team July 2024 – Present
Apple *Austin, TX*

- **Built a greenfield GenAI backend service** from an empty repository to production on Java, Spring Boot, and WebFlux with MongoDB persistence, delivering five synchronous and reactive (SSE-streaming) API endpoints that became the canonical platform for conversational-AI, autofill, and summarization across advisor support tools.
- **Engineered a distributed, self-healing background-processing subsystem** using atomic per-record claiming, locale-batched downstream calls, and a live-traffic-driven circuit breaker; an iterative, measurement-driven redesign collapsed roughly 100 sequential database round-trips into single bulk operations and eliminated duplicate processing across horizontally scaled pods.
- **Led the first team service onto the latest framework stack** (Java 25, Spring Boot 4), diagnosing and resolving ten distinct build, runtime, security, and CI failures, then codifying the fixes into reusable scaffolding tooling so future service bring-ups start production-ready.
- **Drove a major authentication-pipeline framework migration** on a high-traffic advisor service, designing a configuration-profile pattern that let one deployment command serve both legacy and new pipelines across concurrent release trains, and diagnosing plus shipping a same-day fix for a production outage that had blocked advisors.
- **Designed a configuration-driven response-builder architecture** that serves three distinct consumer applications from a single codebase, cutting duplicated logic and accelerating multi-tenant feature delivery; built OAuth2 and structured-logging infrastructure that enabled per-tenant observability dashboards and SLO monitoring.
- **Advanced AI-assisted engineering and cross-team delivery** by driving a three-service framework upgrade with an AI coding agent (diagnosing and escalating an upstream tooling defect that was then fixed platform-wide), coordinating an identity-endpoint migration across four services in five days with zero downtime, and delivering an org-wide talk on multi-server AI tool integration (Model Context Protocol).

Backend / Full-Stack Software Engineer Intern Sept 2023 – Dec 2023
Splunk Inc. *Daytona Beach, FL*

- Performed security analysis to identify and remediate admin-credential vulnerabilities across 40+ servers.
- Engineered “Custom Splunk Exec”, a Ruby-based Puppet Type & Provider that prevents credential leakage during API execution, improving compliance posture by 30%.
- Enhanced system idempotency and manageability, leading to a 45% improvement in configuration-drift recovery time.

Student Researcher – EcoCar EV Challenge Sept 2022 – Dec 2023
General Motors / Bethune-Cookman University *Daytona Beach, FL*

- Integrated Advanced Driver-Assistance Systems (ADAS) into an electric-vehicle prototype using C++ and ROS 2.
- Developed a YOLO-based CNN for real-time pedestrian tracking (Python + TensorFlow), boosting detection accuracy by 35%.

Projects

Compliance Monitoring System *Python, Solidity, ML, Kafka* Jun 2023 – Present

- Implemented Kelly Criterion, mean-reversion, and momentum strategies on Ready Trader Go market data, yielding a simulated 15% performance lift.
- Built an AdaBoost-based predictive model that improved trade decision accuracy by 20%.
- Automated regulatory scraping and generated immutable compliance reports via Ethereum smart contracts.

Competition

- Participant – Optiver Ready Trader Go (2023)
- Participant – IMC Trading Prosperity (2023 & 2025)

Technical Skills

Languages: Golang, C/C++, Java, Kotlin, JavaScript/TypeScript, Python, Rust, Ruby, Elixir, R
Frameworks: Spring Boot/WebFlux, React, Flask/FastAPI, Django, Ethereum, UVM, Kafka
Technologies: Kafka Streams, Redis, Docker, Kubernetes, Jenkins, AWS, Terraform, Ansible, Puppet, OAuth2/OIDC, Grafana, Splunk, Model Context Protocol (MCP)
Libraries: TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib
Databases: MongoDB, PostgreSQL, MySQL, DynamoDB, Redis
